

Press Release No.1

POCKETLANCE TURNS YOUR PDA-DEVICE INTO A FULLY FUNCTIONAL WORKSTATION ENABLING THE OPTION OF NETWORK BROWSING WITH YOUR POCKET PC

For Immediate Release

Contact: Ivan Matychyn, Sales Manager
Digsee Ltd. / Cresotech, Inc.

Cresotech, Inc., a Digsee division, has released PocketLANce, a Pocket PC tool that allows browsing and managing local Windows network resources. Designed for both personal and corporate use, PocketLANce provides the benefits to everyone: software developers, business people, and all home users who own Pocket PCs and work with corporate LAN resources, etc. This application provides a unique easy-to-use option of locating, retrieving and replaying network image-, sound- and multimedia files via conventional ActiveSync connection, Ethernet network adapter or even mobile phone/modem.

As the name implies, Cresotech PocketLANce is a software program for operations with LAN from a Windows CE- powered device (Pocket PC). Cresotech PocketLANce turns your Pocket PC into a fully functional workstation providing it with access to the local Windows-network resources. This program launched, there is no further necessity to use ActiveSync each time you want to copy a file to/from PDA-device. As far as future versions appear, Pocket PC users will be able to access their network directly, bypassing Desktop PC. This will help to fill the gap between Pocket and Desktop PC applications.

Cresotech PocketLANce does not require any additional software drivers/libraries or extra hardware equipment. In order to use Cresotech PocketLANce you don't even need to have an Ethernet- or PC-card! Although having one, would give you an advantage, as far as using PC card will significantly increase the speed of network connections resulting in more effective and comfortable work.

Moreover, PocketLANce also gives a great opportunity of remote mobile network access via mobile phone or modem using RAS (Remote Access Service) or DUN (Dial-Up Networking). It allows external users to access the local network anytime anywhere as if they were locally connected to the LAN.

Cresotech, Inc. is also announcing release of PocketLANce Software Development Kit. PocketLANce SDK is a function library that gives C, C++ developers and system integrators everything they need to build local networking capabilities into commercial or custom applications based on the Microsoft Windows-Powered Pocket PC platform. For more information on PocketLANce Software Development Kit go to the product page at http://www.pocketlance.com/pocketlance_sdk.shtml.

Cresotech PocketLANce costs \$29(US) for full single-user licenses. Trial versions and full details are available for free download from our web page: <http://www.pocketlance.com>

Site licenses are obtainable on request.

Press Release No.2

CRESOTECH POCKETLANCE - A LAN IN YOUR POCKET

For Immediate Release

Contact: Ivan Matychyn, Sales Manager
Digsee Ltd. / Cresotech, Inc.

Cresotech, Inc. has released a new version of PocketLANce - a new LAN browser for Pocket PC. PocketLANce 1.05b is now available for all users of Pocket PC devices running Windows Powered CE 3.0 operating system. With Cresotech PocketLANce users can easily browse, locate, and download files directly from network servers. So this software turns your PDA device into a fully functional workstation providing full access to Windows Network resources from your Pocket PC.

The advantages of shared resources - be it shared Internet access, printer, storage or any other network-connectable units - are obvious not only for the network engineers, but for an increasing number of business people that run networks at work and at home. Until now, accessing these resources on Pocket PCs has required getting into complicated and cumbersome procedures. PocketLANce cuts these angles and adds superb LAN browsing capabilities to Pocket PC devices running Windows CE 3.0. Moreover, PocketLANce supports ARM, MIPS as well as SH3 CPUs, thus leaving out of the loop no Pocket PC users.

Now SH3- and MIPS-powered PDAs (such as Casio, first generation HP Jornada, Symbol etc.), which cannot be upgraded to MS Pocket PC 2002, are leapfrogged by PocketLANce to the state-of-the-art LAN-browsing capabilities.

Cresotech PocketLANce requires no additional software drivers/libraries or extra hardware equipment. The network access is granted as soon as your Pocket PC is placed into a cradle connected to a PC with a LAN connection. Even more lucrative option would be to browse the network resources from your Pocket PC device without using the cradle: a network card or wireless network card driven by PocketLANce would do that for you.

PocketLANce sets new horizons of remote mobile network access via either wireless network card or mobile phone/modem when using Remote Access Service or Dial-Up Networking. It allows external users to access the local network anytime anywhere as if they were locally connected to the LAN.

Cresotech, Inc. also announces the release of its PocketLANce Software Development Kit. PocketLANce SDK is a function library that gives C, C++ developers and system integrators all they need to incorporate local networking capabilities into commercial or custom applications based on the Microsoft Windows Powered CE 3.0 Pocket PC platform. For more information on PocketLANce Software Development Kit go to the product page at http://www.pocketlance.com/pocketlance_sdk.shtml.

Pricing

Promotional price is \$29 (US) for full single-user license. Site licenses are obtainable on request.

Trial versions and full details are available at our website: <http://www.pocketlance.com>

Press Release No.3

CRESOTECH, INC. ANNOUNCES POCKETLANCE SOFTWARE DEVELOPMENT KIT (SDK) FOR MOBILE NETWORKING

For Immediate Release

Contact: Ivan Matychyn, Sales Manager
Digsee Ltd. / Cresotech, Inc.

PocketLANce Software Development Kit (SDK) along with PocketLANce provides a possibility for developers of Pocket PC based corporate applications and systems to access the local network resources from PDA-device using ActiveSync connection, PC card or modem.

Cresotech, Inc. announces PocketLANce Software Development Kit for Pocket PC platform - a new development package for Pocket PC developers that require the facility for mobile users to access, write and read corporate network files.

PocketLANce SDK enables developers and system integrators with the option to quickly create data processing applications capable of fast data communication between PDA-device and corporate network resources. Capability to quickly and easily organize direct file interchange on several handheld-devices gives developers great power to write program scripts both for vertical and horizontal markets, e.g. retail and personal services, customer management, sales, promotion, marketing, etc.

PocketLANce SDK allows to incorporate the unique functionality of PocketLANce into developer systems and applications. PocketLANce is a unique application allowing Pocket PC users to browse and manage LAN resources from their PDA-devices. This software development bridges the gap between Pocket and Desktop PC applications.

In general, no additional hardware is needed to run PocketLANce SDK application: file access mode is supported as soon as PDA-device is put in a cradle connected to any LAN computer, simultaneously providing its access to all network files and folders. In addition, PocketLANce SDK provides full control of the state of the accessible network resources and full diagnostics. Moreover, developers have the option of using Ethernet network adapters providing faster and more comfortable access.

Actually Wireless Network Access

And, finally, PocketLANce SDK ensures an actual wireless access to the corporate network files and folders! Having installed Remote Access Service (RAS) in the corporate network, developers obtain the capability to access corporate network files either wirelessly or through modem.

Packaging and Pricing

PocketLANce SDK is available for purchase immediately at the following address:
<http://www.pocketlance.com/register/index.htm#sdk>. The development package is priced at \$399 (special price), and includes PocketLANce SDK with a single PocketLANce license. Individual PocketLANce licenses are available for the clients that intend to run the application on multiple remote units.
