

Press Release No.1

PocketSafe Personal Data Protection Secures Your Information Privacy

For Immediate Release

Contact: Ivan Matychyn, Sales Manager
Digsee Ltd. / Cresotech, Inc.

Cresotech, Inc. has released Cresotech PocketSafe version 1.16, a PocketPC based security solution for personal data protection.

Personal data protection is crucial both in business and private life. Each online access, credit card, mobile phone, and software product is identified by individual PIN or password. This confidential information should be easily accessible by the owner, but safely protected from unauthorized viewers.

Cresotech PocketSafe ensures your privacy by storing and organizing passwords, credit card numbers, and other hard-to-remember personal information on your PocketPC. By using this software, your data is encrypted and can be quickly accessed with a password you select - the only one you have to remember for accessing the whole database. With PocketSafe for PocketPC, you will feel safe keeping your confidential data in a pocket, while keeping it constantly at your fingertips. Even if your Pocket PC is lost or stolen, your data will remain confidential due to three levels of information protection - Pocket PC device internal protection, data file protection and individual entry protection.

The mobile world requires mobile solutions with data confidentiality protected: PocketSafe gives you this full protection. PocketSafe allows you to secure important data of 8 basic types: a specific template for each particular type makes data entry more convenient. The database file and each data entry within the database can be password-protected, thus providing more security. Strong DES encryption algorithm and double password protection make sure that your confidential information is for your eyes only!

PocketSafe also allows you to store information in several different files. It is quite handy to structure all the information you need for your employees, colleagues, kids or spouse. Customizable interface and other adjustable features make this software product user-friendly and easy-to-use. PocketSafe has a comprehensive help menu covering all features.

Best of all, this software runs on both desktop and Pocket PCs, so data can be quickly edited on your desktop computer or, vice versa, on PDA and then synchronized through ActiveSync. The desktop version of the software - Cresotech DesktopSafe - does the same work as PocketSafe for those who prefer the quick data input on their desktop PC. DesktopSafe is available in two versions - Lite and Pro. The Lite version of Cresotech DesktopSafe is available FREE OF CHARGE at <http://www.cresotech.com/desktopsafe/> and can be upgraded to Pro version for only \$10. In addition to all common features, Pro version of DesktopSafe provides you with the ability to conveniently export/import database files to and from your Pocket PC device.

System Requirements

Pocket PC (all popular models: Compaq IPaq, Casio Cassiopeia, HP Jornada, Symbol, etc.) running on Windows CE 3.0 or higher. Required Free Space - 400Kb on Pocket PC and 1Mb on desktop PC. Supported Processors include ARM, SH3, MIPS.

Price and Promotion

Shareware. 30 days trial. Full version costs \$19. 10 % discount available for purchase of PocketSafe and DesktopSafe Pro together. German edition is also available.
